SUCITESA
PROFESSIONAL CLEANING

What is **Green Key?**

- "The Green Key certification is one of the most important **international eco-certifications for tourist accommodations.**"
- "To obtain this recognition, establishments must comply with **very strict environmental criteria that are audited annually.**"
- The establishments eligible for the GREEN KEY eco-certification include **Hotels, Hostels, Campsites, Amusement Parks, Small accommodations, Conference Centers, Restaurants, and Attractions.**

Why choose **Sucitesa?**

Since our beginnings, at SUCITESA, we have committed ourselves to **managing natural resources, manufacturing materials, and end products responsibly**, prioritizing waste reduction and minimization.

This sustainable approach led us, in 2004, to **obtain ISO 14001 certification**, implementing an Environmental Management System focused on continuous improvement. Through this initiative, we have allocated significant resources, structured our operations, and meticulously planned each of our activities with the aim of harmonizing our commitment to the environment.

This effort is reflected in the attainment of recognized quality certifications from AENOR, including **ISO 9001 and 14001 standards**, as well as BPF certification, demonstrating our unwavering commitment to excellence and sustainability.

To obtain the GREEN KEY certification, it is essential that at least 75% of the products used in daily cleaning have the **ECOLABEL** ecological distinction.

HOW

will we make it possible?

With our EASYMIX concentrated system and the NATURSAFE range, certified with the **ECOLABEL stamp**, you will find the perfect solution to meet the requirements demanded by the GREEN KEY certification.

This system allows you to **minimize the environmental footprint, reduce the impact of products on users, decrease the generation of plastic waste**, and mitigate the negative impact associated with transportation.

The innovative EASYMIX System is a **precise dosing solution designed to maximize efficiency and minimize waste**. This system allows users to adjust the exact amount of product needed for each cleaning task, streamlining usage and significantly contributing to the reduction of water and chemical consumption. EASYMIX's precision not only optimizes resources but also reduces the environmental footprint of daily cleaning operations.

The NATURSAFE range, endorsed with the prestigious ECOLABEL certification, includes cleaning products formulated **under strict environmental criteria**. These products not only demonstrate effectiveness in cleaning and maintaining various environments and surfaces but also **ensure a reduced impact on the ecosystem**.

The ECOLABEL certification ensures that each NATURSAFE product has been thoroughly evaluated to meet criteria ranging from biodegradability and aquatic toxicity to energy efficiency during production.

- 1. Easily Connect:** A modular system that assembles and connects equipment effortlessly.
- 2. Water Connection:** Link the system to any water source.
- 3. Choose Your Products:** Select concentrated products according to your needs.
- 4. Automatic Dilution:** EASYMIX prepares the perfect mixture for you, based on the pre-configured dilution.
- 5. Ready to Use:** Simply apply the product as it comes.

naursafe

naur safe PLUS SHINE

Bathroom cleaner. Multi-Surface cleaner.

Cleans, polish, and protects the surface. Prevents lime buildup. Provides an air freshening effect.

NATURSAFE is more than just a line of cleaning products; it's a **conscious choice** for those who value effectiveness, health, and the environment.

With each use, NATURSAFE not only cleans and protects our facilities and spaces but also **cares for our planet.**

naur safe PLUS GLASS

Glass cleaner. Multi-Surface cleaner.

Cleans and polishes glass, mirrors, and other similar surfaces in one step. Streak-free shine. Quick drying. Leaves no traces or marks.
